Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
 - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
 - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
 - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bacon in view of Ingram.

Bacon teaches a fuel pump connection (38) which includes a mounting area (54) including flexible undulations (68) which act to seal the pump inlet pipe (not shown). Cap (59) would correspond to applicant's shoulder (35) and it is clear from Figure 3 that the seal is cantilevered between the housing (50) and the cap (59). Note also that (54) is both a flat disc and a curved-shaped part (claims 7 and 8)

Ingram teaches a fuel pump connection which shows an outlet pipe with recesses that mate with an elastic member. The outlet used on the pump is a typical outlet used to couple elastic pipes such as pipe (13) shown.

It would have been obvious to modify Bacon by constructing the outlet pipe as taught by Ingram because such pipes are commonly used to connect to elastic outlet hoses and would have worked equally well with the elastic seal of Bacon.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
